PD 6589

Distance plate

Code No.	Type	H
7-631-3986	PD 6589-192x192-96 H=60	60
7-631-3980	PD 6589-192x192-96 H=100	100

Features:

- The distance plate is used on 5-axis CNC machines allowing for raising the vise or the workpiece mounted to the zero-point base plate.
- With the distance plate it's possible to increase the angle range of the rotation axis, which allows for machining bigger size or more complex workpieces.
- The distance plate helps increasing precision and quality of machining of complex parts due to possibility of accessing the workpiece from wider variety of angles.
- Ability of accessing the workpiece from more angles in a single setup helps minimizing the setup time and increases productivity.
- The distance plate can be mounted to 96x96 zero-point bases or directly to a T-slotted table using keys and clamps or screws with T-nuts.
